# Shrishanth A J

Bangalore, Karnataka, India | shrishanth1807@gmail.com | linkedin.com/in/shrishanth-aj | github.com/Shrishanth-AJ | shrishanth-aj.github.io

## Summary

First-year B.Tech CSE (AI & ML) student who builds local AI assistants, Python automation pipelines, and hackathon prototypes. Looking for internships and hackathon teams.

## Education

**B.Tech in Computer Science & Engineering (AI & ML)**, 2026 - 2030 S-VYASA Deemed to be University, School of Engineering & Technology, Bengaluru, India

## Technical Skills

- **Languages:** Python, C, C++, SQL, JavaScript (basics)
- **AI & Automation:** LLM prompting, Ollama (local LLMs), faster-whisper, MediaPipe, discord.py
- **Backend & Data:** FastAPI, WebSockets, SQLite, Pandas, BeautifulSoup, Requests
- **Tools:** Git, GitHub, Linux, VS Code, ADB, Excel / Google Sheets
- **Soft Skills:** Rapid prototyping, technical communication, event management, team leadership

## Projects

**Project ULTRON: Local Voice-Controlled AI Assistant** | Python, Ollama, faster-whisper, FastAPI, MediaPipe, ADB | In active development

- Built a JARVIS-style assistant that runs fully on a laptop with no paid APIs: wake word, local speech-to-text, a spoken voice, and replies from a local LLM (qwen2.5:3b via Ollama).
- Implemented laptop control (apps, volume, lock, screenshots, system status) and Android phone control over ADB, plus hand-gesture control with MediaPipe.

- Developed a FastAPI + WebSockets dashboard with a live system panel, a background job queue with voice approval, and a generator that turns one sentence into a hackathon pitch deck, script, judge Q&A, and a working demo site.

**THERMO-SHIELD: Solar Defense Habitat** | Systems design, PCM thermal storage | InnovateX 2026

- Co-designed, in a team at my first hackathon, a portable zero-fuel solar thermal shelter concept for DRDO problem statement 26051, aimed at high-altitude outposts such as Ladakh.
- Combined Phase Change Material (PCM) heat storage with aerogel and PUF insulation, targeting 16-20 °C indoors at -30 °C outside for 2-4 people; packs into a 120 × 60 × 40 cm bag and sets up in under 15 minutes (design targets).

**Automated Directory & Lead Scraping Pipeline** | Python, BeautifulSoup, Pandas | 2026

- Built Python scrapers that extract business listings into clean CSV and Excel files.
- Added request throttling, retries, and automatic deduplication to keep runs reliable and polite to target sites.

**Discord Community Infrastructure & Bots** | discord.py, Webhooks | 2025 - 2026

- Deployed custom bot workflows, permission matrices, and role hierarchies for multi-member tech communities.
- Automated onboarding, event notifications, and real-time moderation.

## Achievements & Leadership

- **Hackathon participant:** InnovateX 2026, School of Engineering & Technology, S-VYASA (Cluster One Technical Association).
- **Technical community lead:** Event management and logistics for campus developer activities.
- **Competitive athlete:** Active basketball player; teamwork and quick decision-making under pressure.
